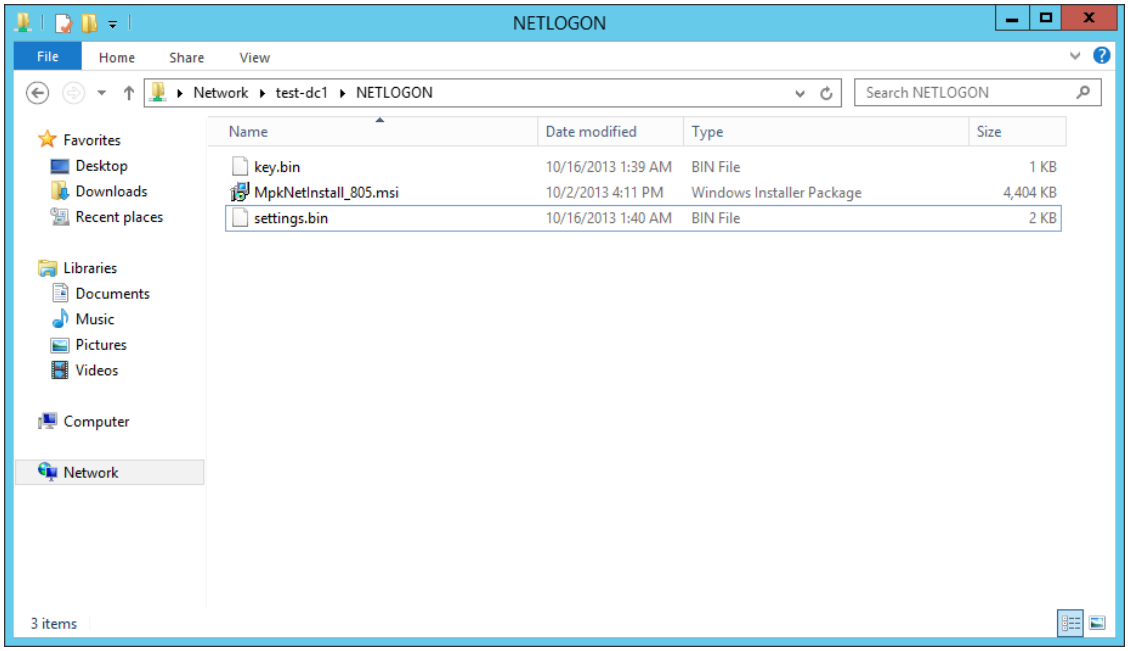
Refog Employee Monitor installing

Installing, upgrading and removing via group policies

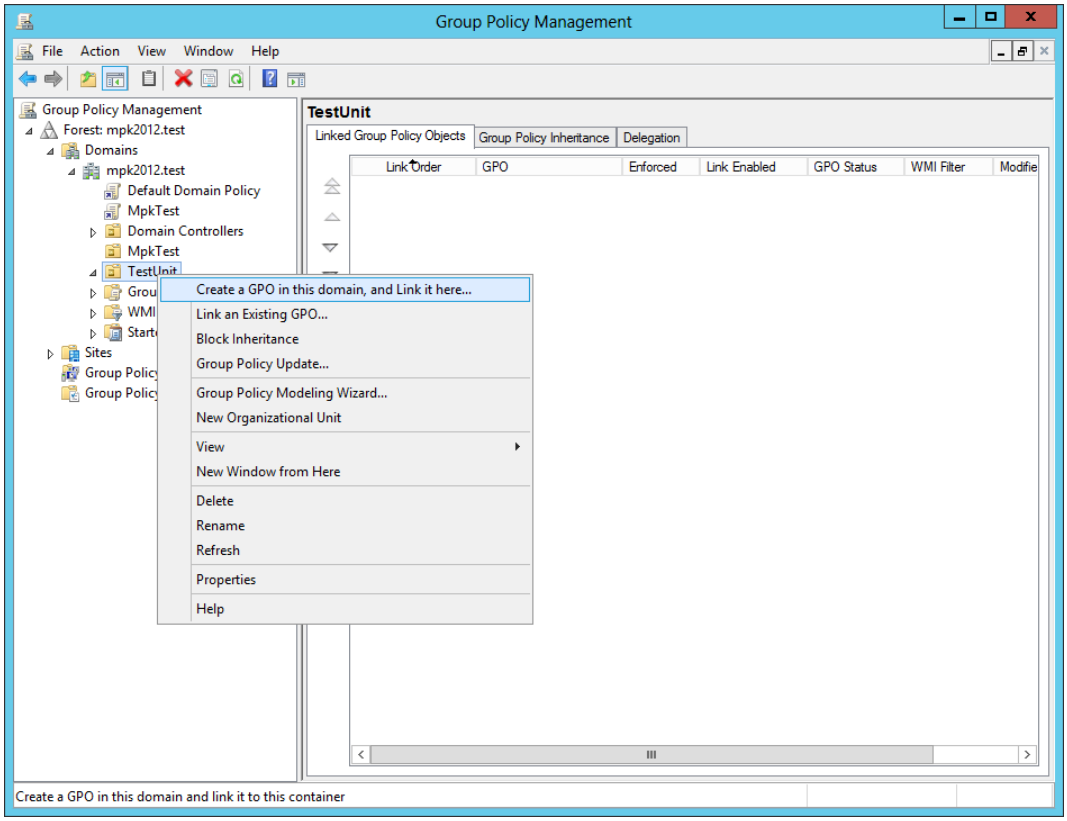
Installing

- Create a network installation point on your service. You can use the **NETLOGON** folder for this purpose.

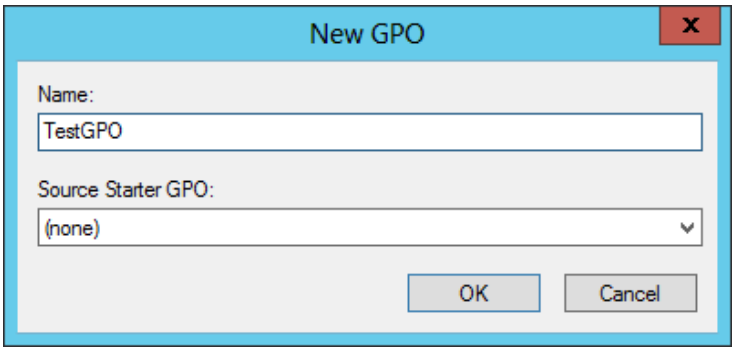
- Copy the installer files: MpkNetInstall.msi, key.bin and settings.bin. It is recommended to join all destination computers into a single organization unit and create a GPO for it.



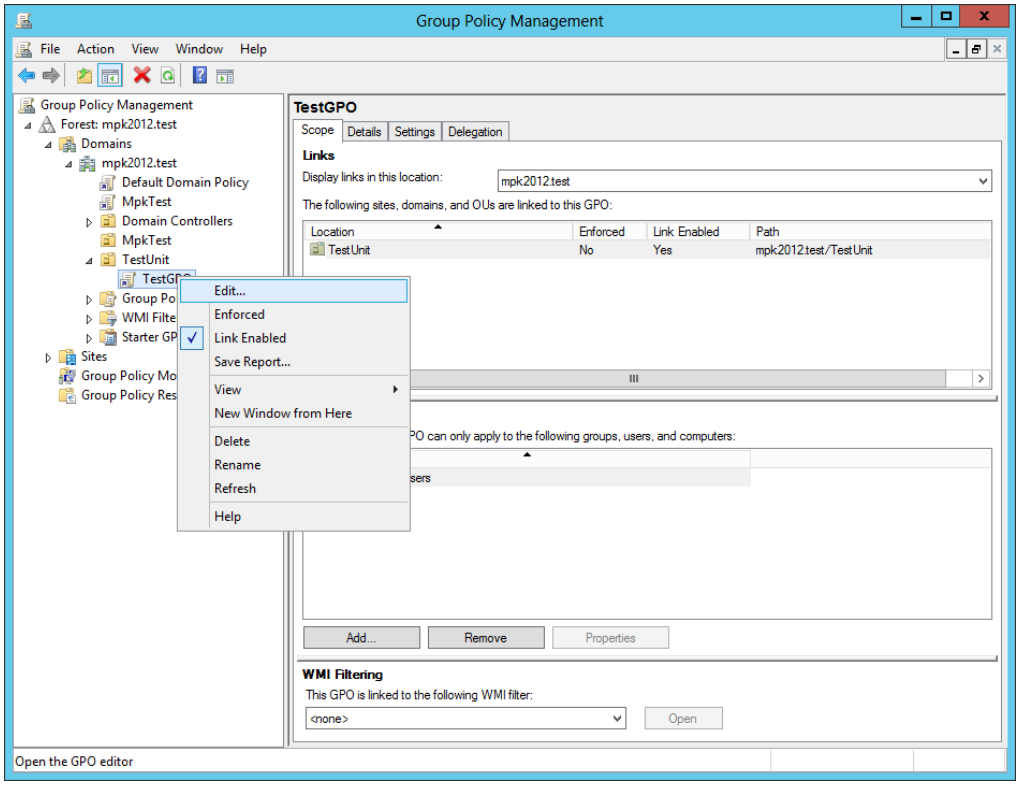
- Open the group policy management window, use the right mouse button to select a group of computers or the domain itself, and click «**Create a GPO in this domain, and Link it here**».



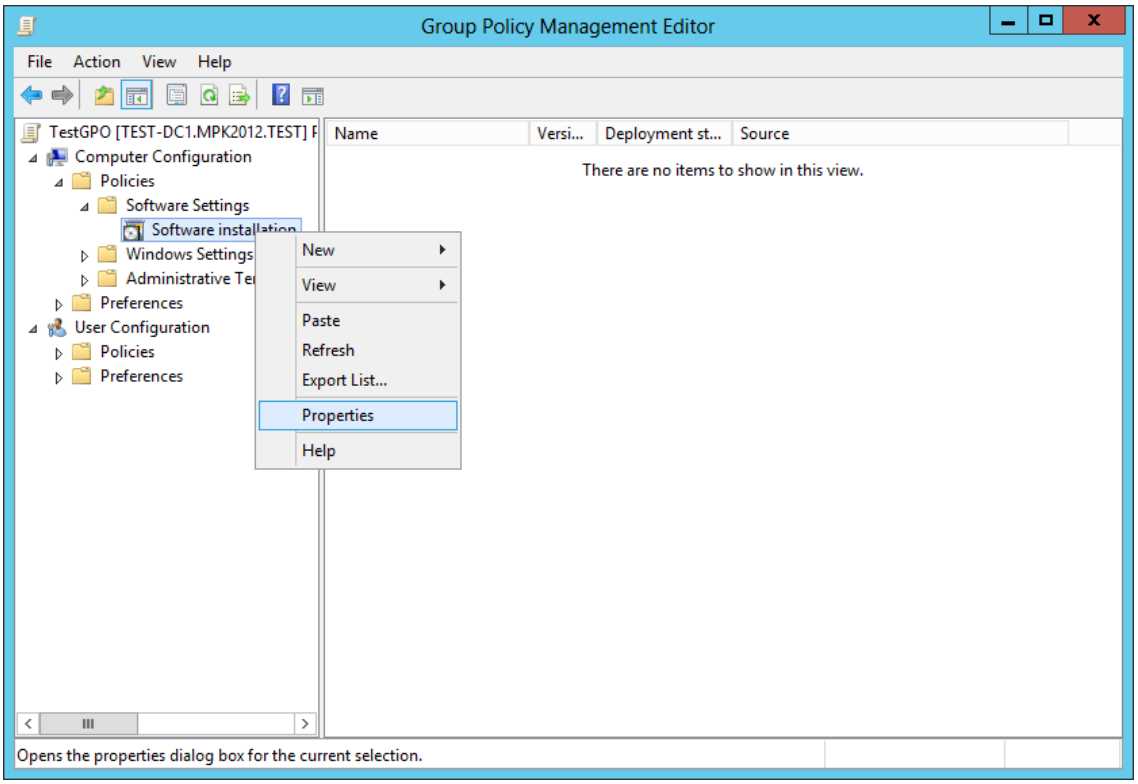
- Enter the policy name and click «**OK**».



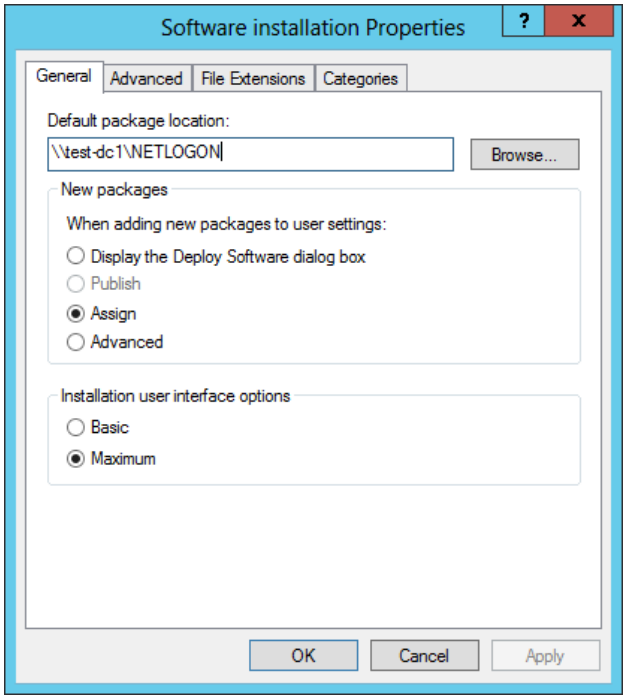
- Right-click on the newly-selected policy and select «**Edit...**» from the menu.



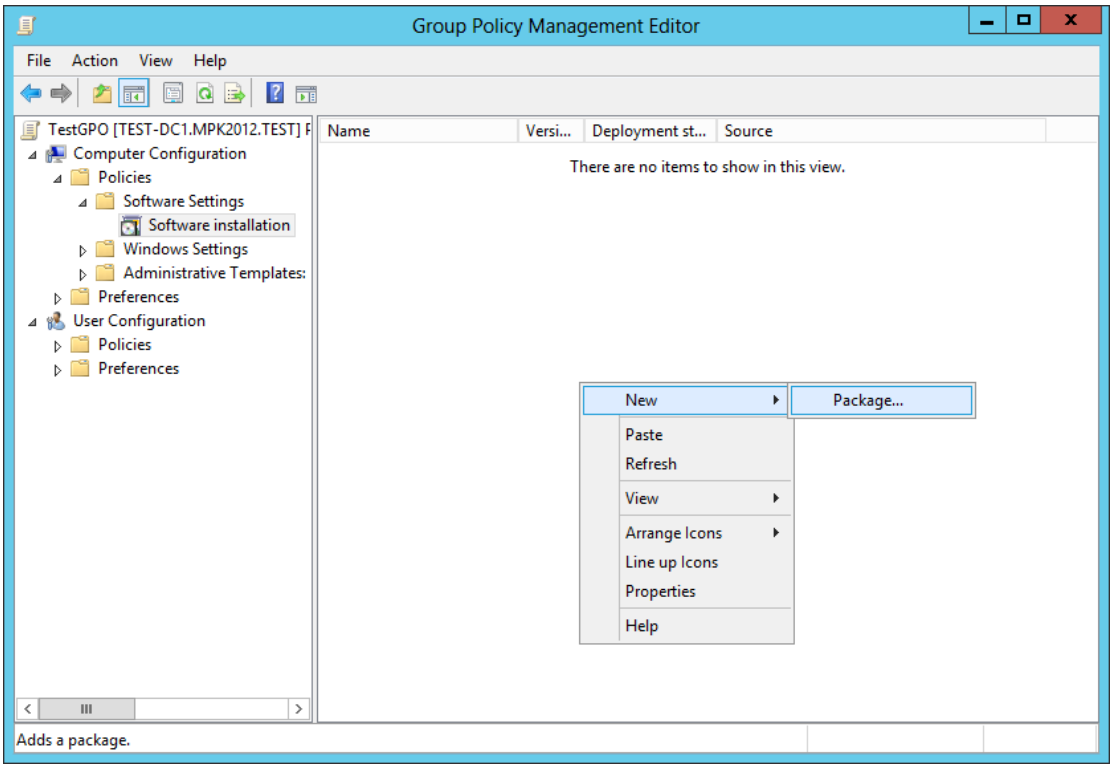
- Open the «**Software Installation**» menu, right-click on it and select the «**Properties**» menu item.



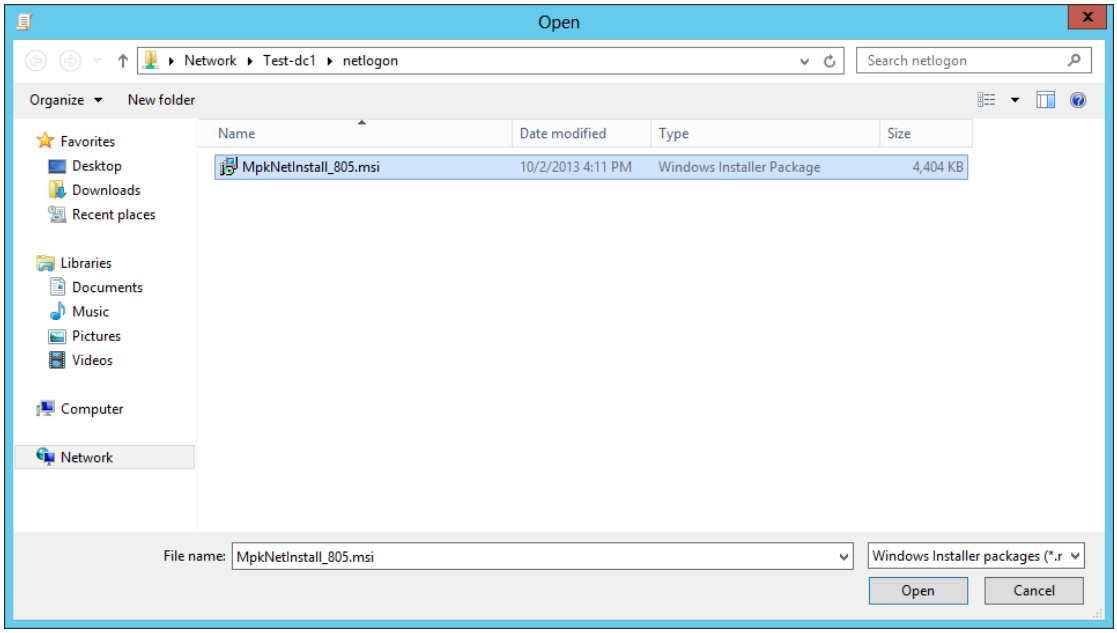
- On the first tab, select «**Default package location**» and set the property to «**Assign**» for new network packages.

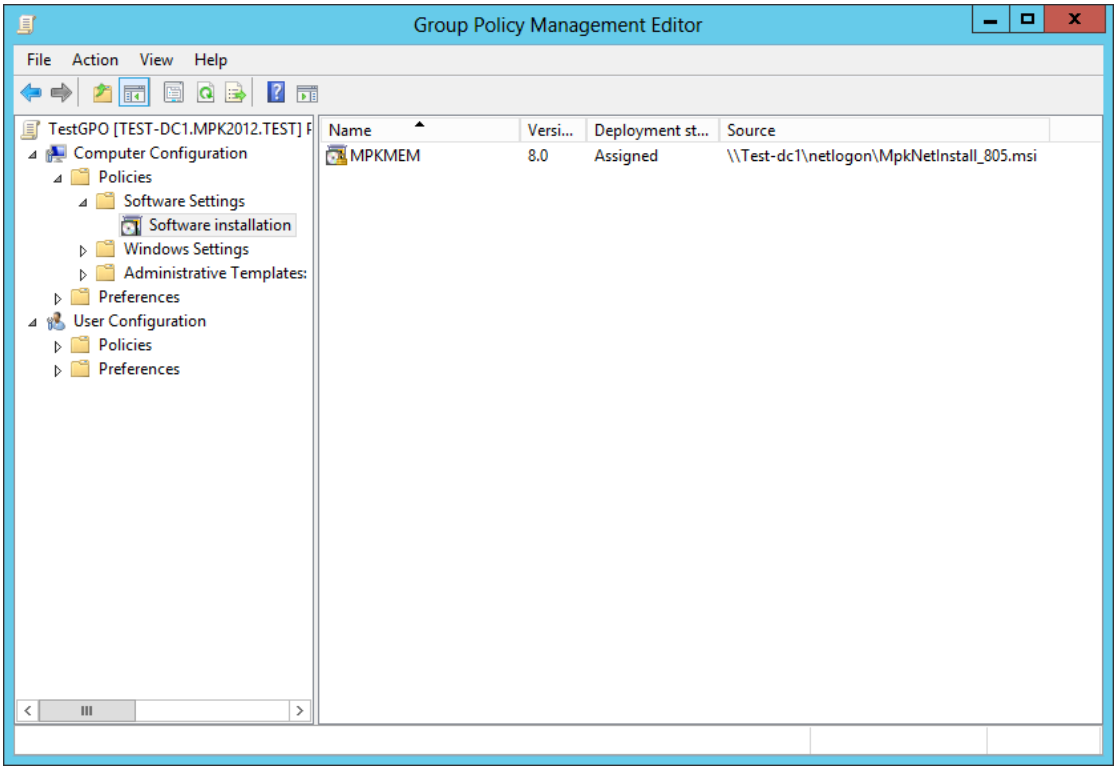


- Right-click on the empty field and select a corresponding command for adding a new installation package.



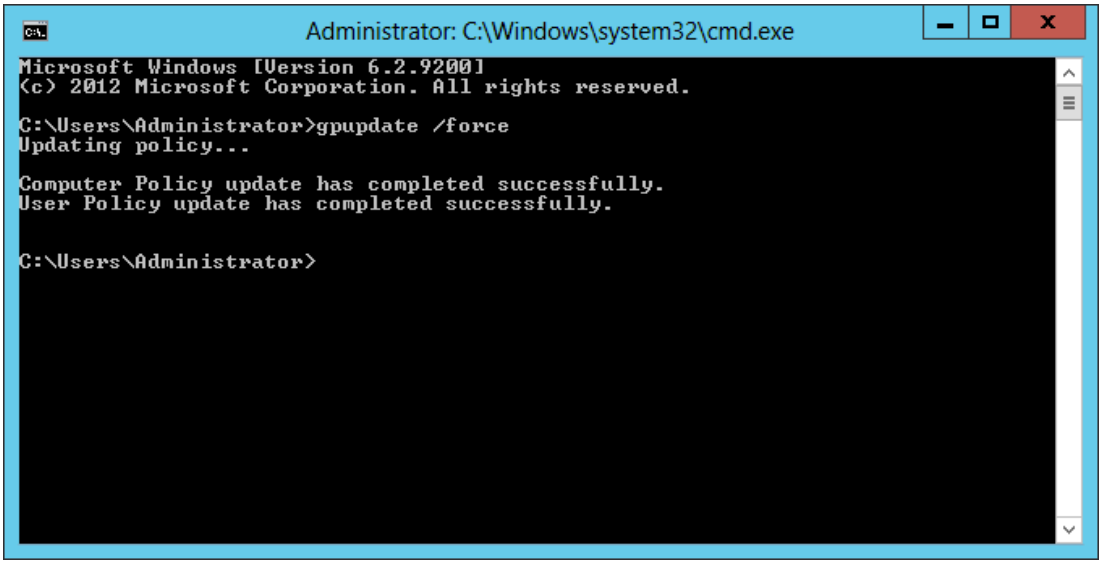
- Select the **MkNetInstall.msi** package from the default package location folder and click «**Open**».





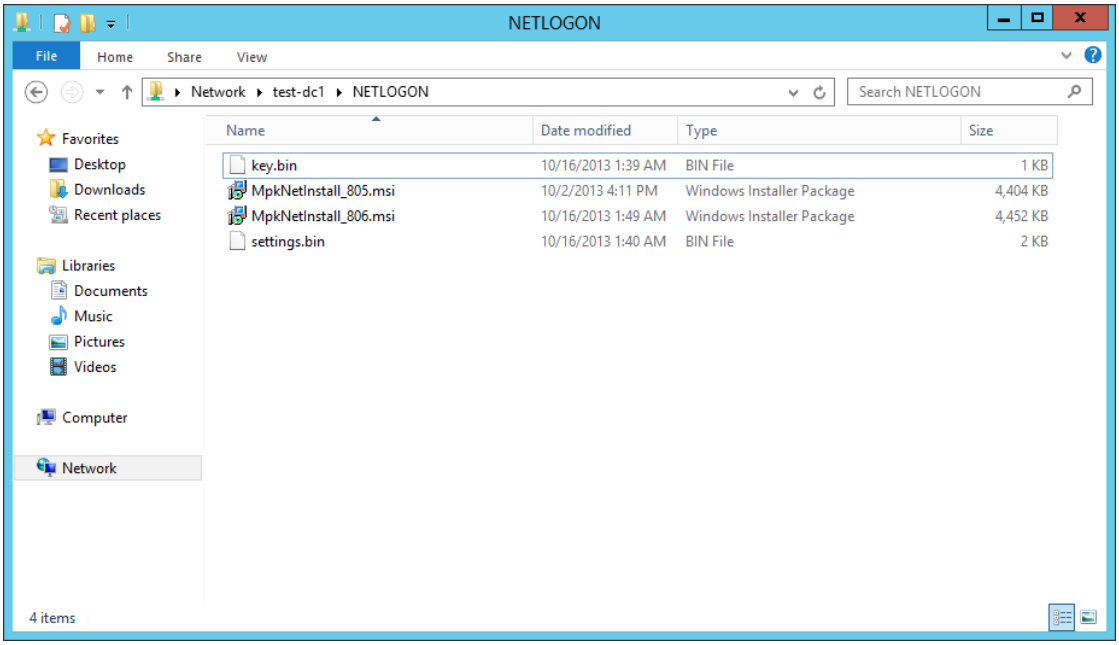
You can now close the policy management window.

- Run the **gpupdate /force** command to update the policies.

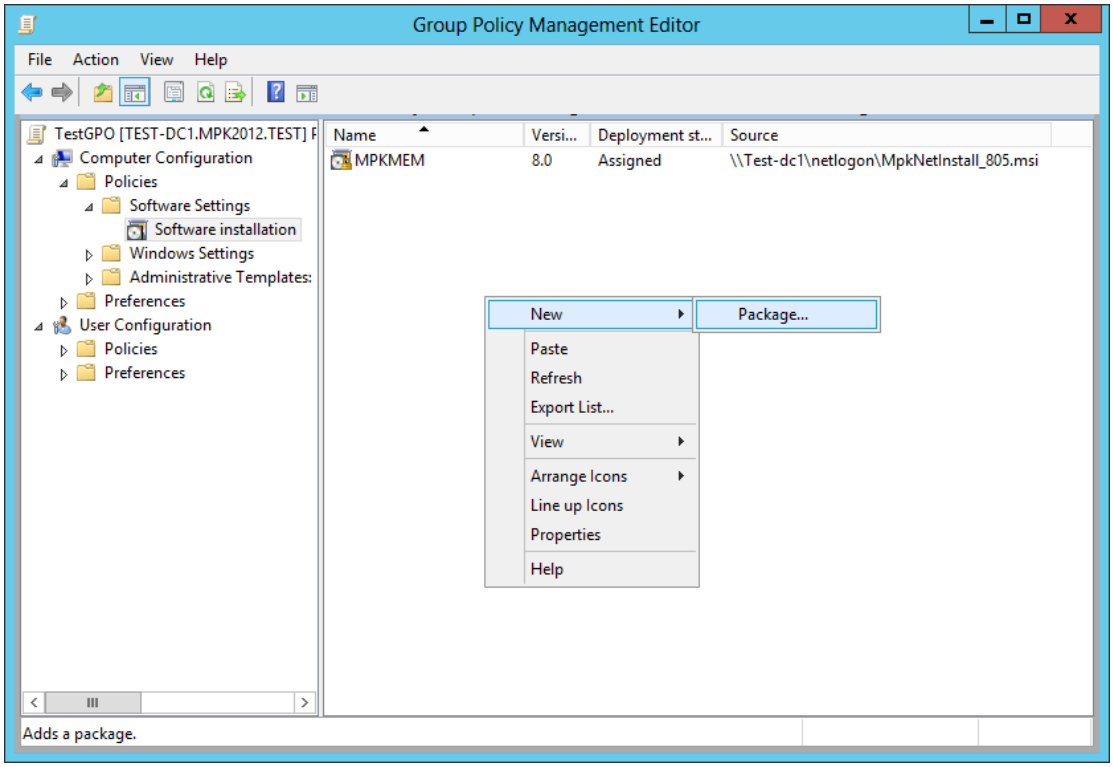


Upgrading

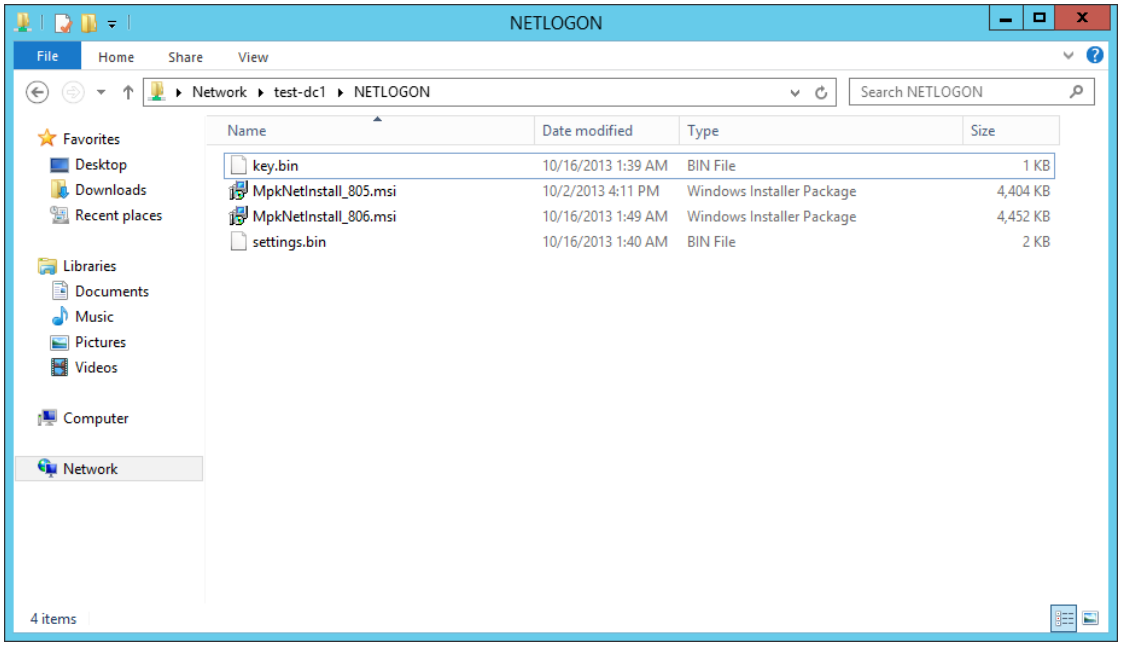
- Copy the new network installer to the distribution folder.



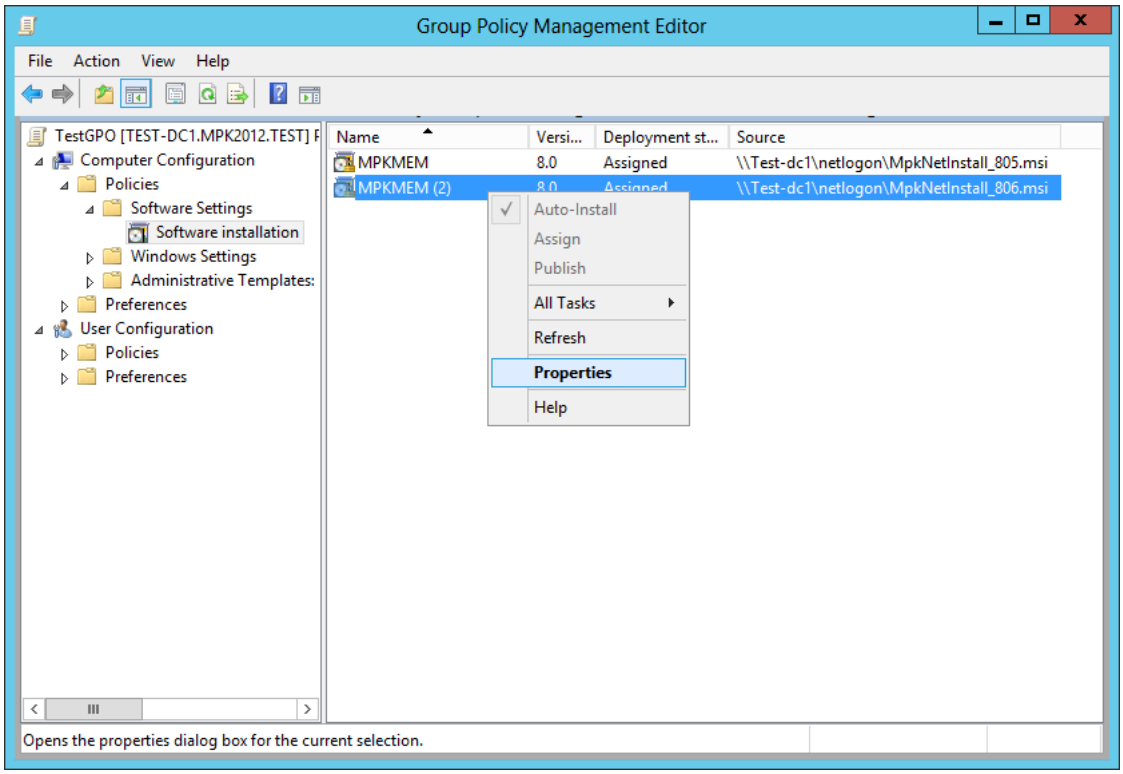
- Open the policy management window to install a network agent. Right-click on an empty field and use a corresponding command to install a network agent. Right-click on an empty field to add a new installation package.



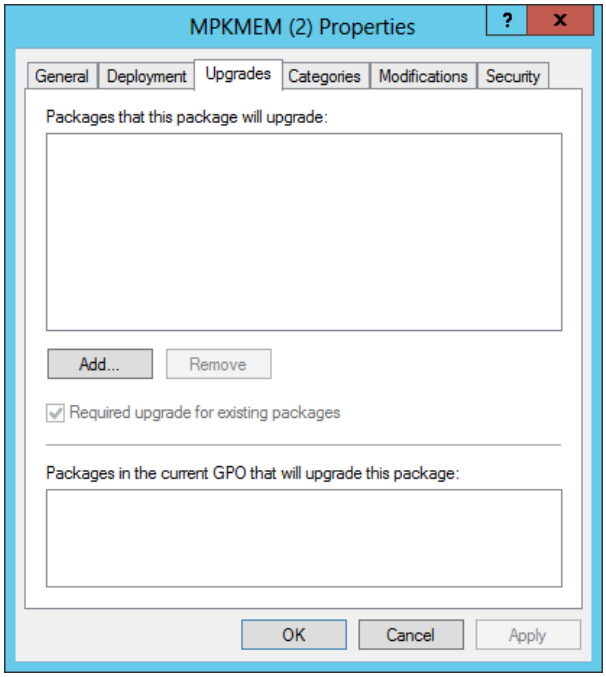
- Select the new version of the package and click «**Open**».



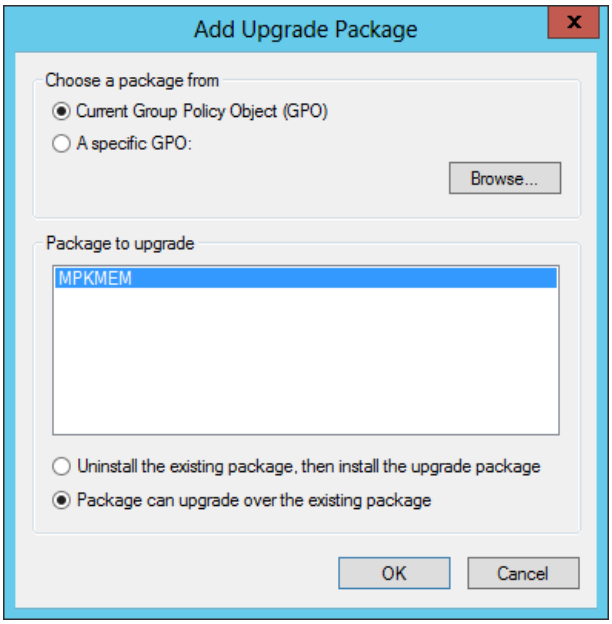
- Select the new version from the list of packages, right-click on it and select the «**Properties**» menu item.



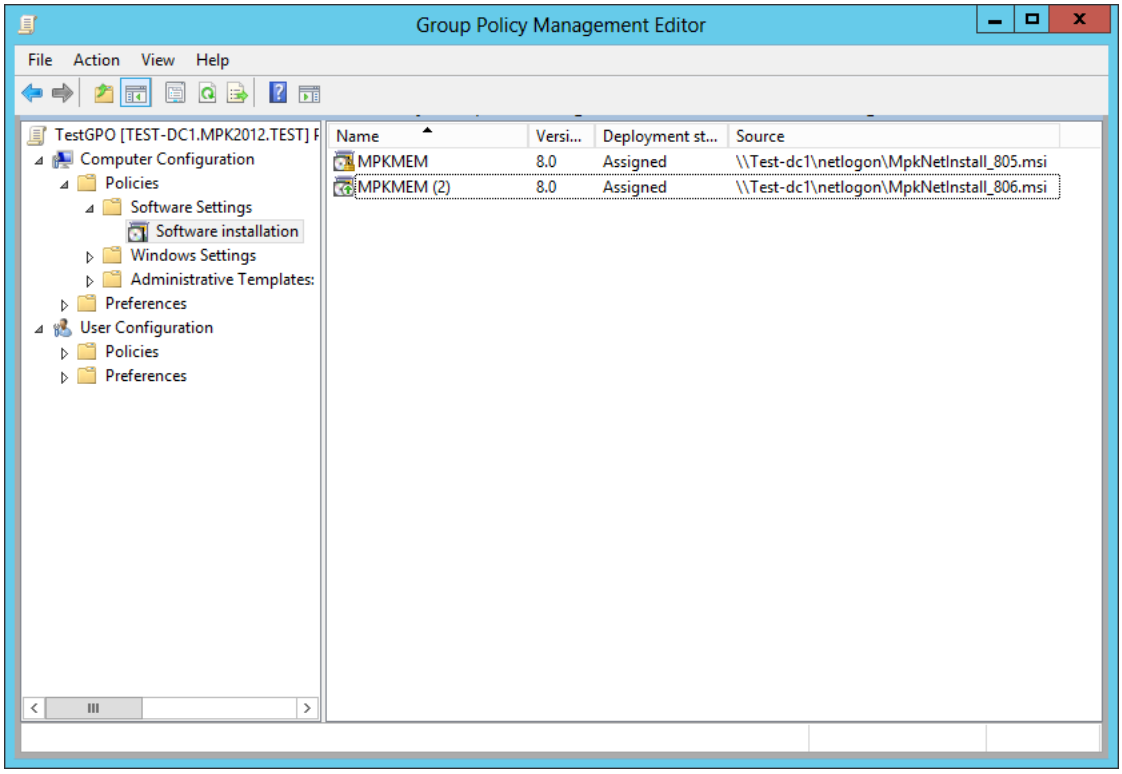
- Switch to the «**Upgrades**» tab and click the «**Add...**» button.



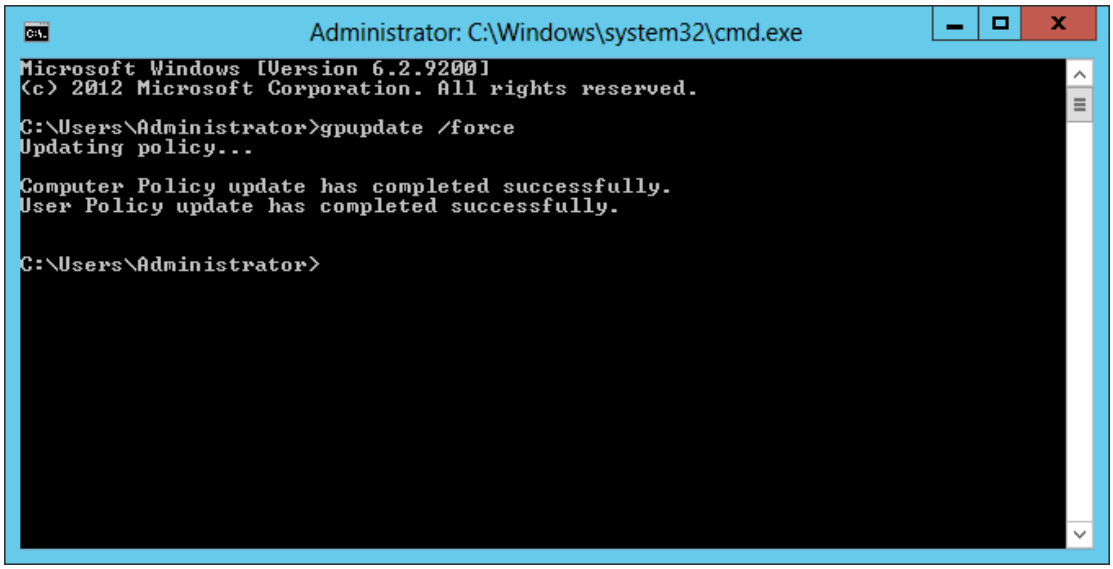
- Select the previous version of the package in upgrade settings and enable the «**Package can upgrade over the existing package**» option, then click «**OK**».



- Click «**Apply**» and then «**OK**» in the upgrade settings window.

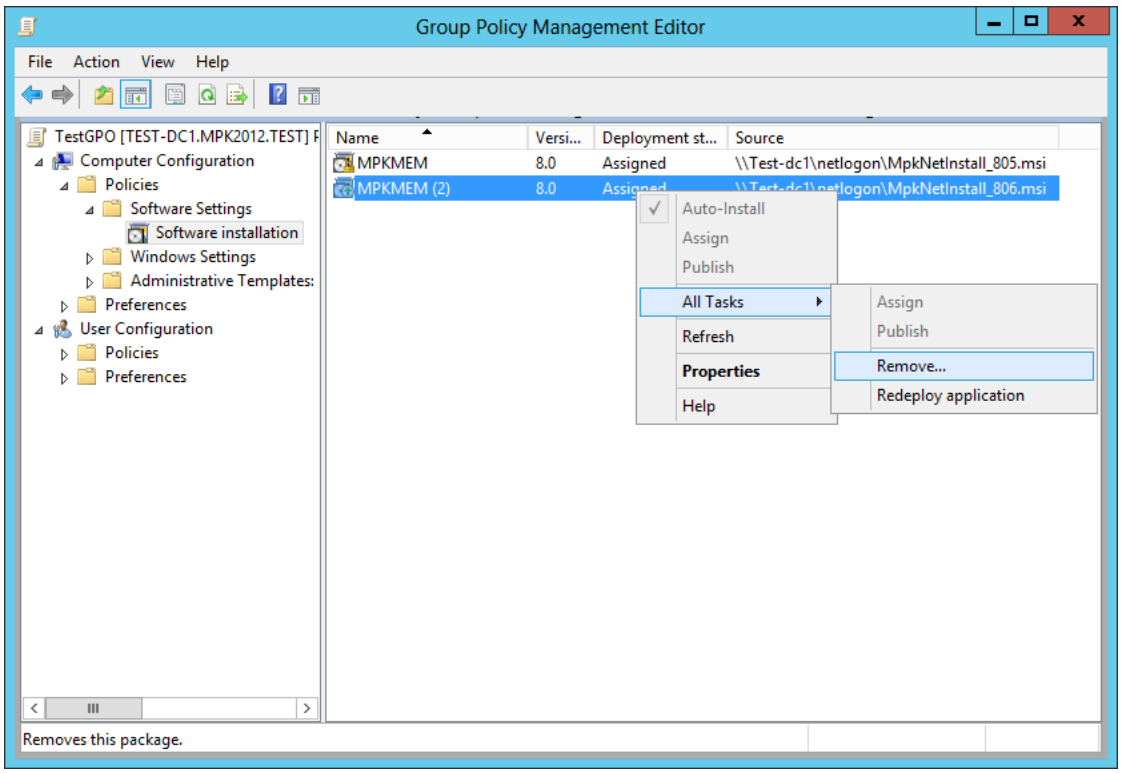


- Use the **gpupdate /force** command to update the policies.



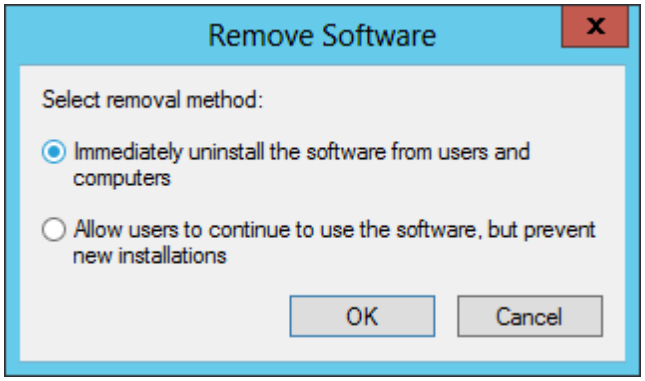
Removing

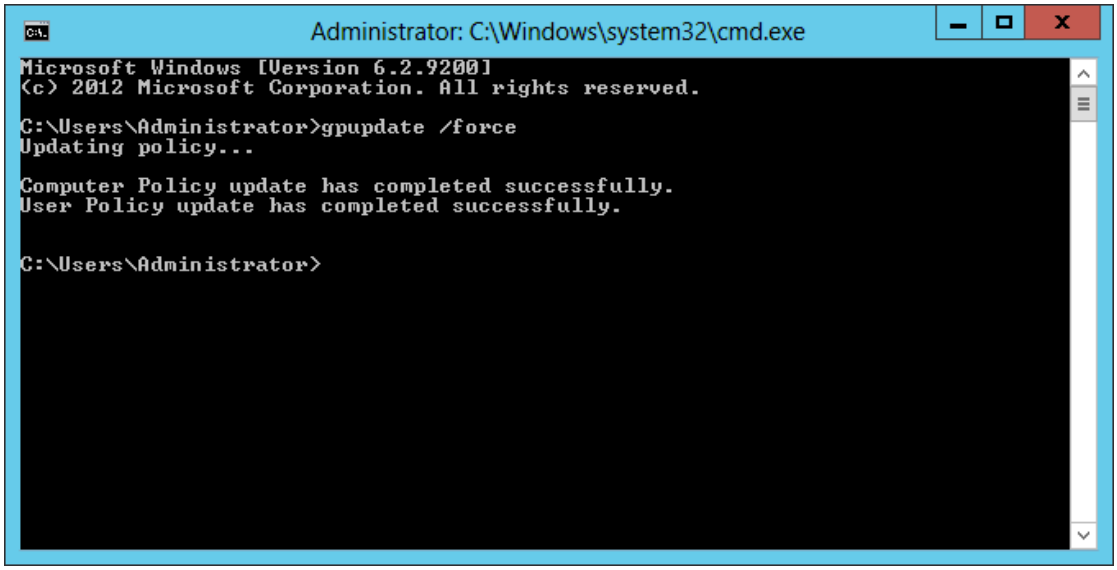
- Open the «**Software Installation**» menu, select the program installation package and right-click on it.



Select the «**Remove…**» command. This must be repeated for all packages.

- Choose to remove the program for all users and click «**OK**».





- Run the **gpupdate /force** command to update the policies.
