

# Refog Employee Monitor installing

---

## Installing, upgrading and removing without a domain

### Installing

- Generate a network installer using the «File» -> «Create an installer» menu command.
- Copy all installation files (*MpkNetInstall.msi*, *key.bin* and *settings.bin*) to a single folder on the computer and run **MpkNetInstall.msi**. You will need admin rights to complete the manual installation.
- Wait until the installation is over – and you are done.
- Connect the computer in the log viewer.

### Upgrading

- Performed identically to installation.

### Removing

- Generate a network installer with the «File» -> «Create an installer» command or use a previously created one.
- Copy all installation files (*MpkNetInstall.msi*, *key.bin* and *settings.bin*) to a single folder on the computer.
- Right-click on *MpkNetInstall.msi* and select «Uninstall».
- Wait until the uninstallation is complete.
